Re: Medicare Part B Prescription Drug Inflation Rebate Comments

Dear Dr. Seshamani:

The Medicare Rights Center (Medicare Rights) appreciates this opportunity to comment on initial guidance from the Center for Medicare & Medicare Services (CMS) for the Medicare Prescription Drug Inflation Rebate Program (Rebate Program). Medicare Rights is a national, nonprofit organization that works to ensure access to affordable and equitable health care for older adults and people with disabilities through counseling and advocacy, educational programs, and public policy initiatives. Each year, Medicare Rights provides services and resources to nearly three million people with Medicare, family caregivers, and professionals.

Based on this experience, we know that people with Medicare are uniquely impacted by high and rising drug prices. This is partly due to utilization and health status. Over two-thirds of Medicare beneficiaries have multiple chronic conditions1 and Part D enrollees take an average of 4 to 5 prescriptions per month.2 At the same time, many live on fixed or limited incomes that cannot keep pace with rapidly escalating drug prices. Half of all beneficiaries—nearly 30 million people—live on $29,650 or less per year, and one quarter have less than $8,500 in savings.3 Health care costs comprise a large and disproportionate share of beneficiaries’ limited budgets: nearly 30% of Medicare households spend 20%

---

or more of their income on health care, compared to only 6% of non-Medicare households.\textsuperscript{4} Out-of-pocket costs for prescription drugs represent a significant share of this amount, accounting for nearly one out of every five beneficiary health care dollars.\textsuperscript{5} As a result, most people with Medicare cannot afford to pay more for care. Yet, costs continue to climb—price hikes on brand name drugs have exceeded the rate of inflation every year since at least 2006.\textsuperscript{6}

The Inflation Reduction Act’s (IRA) Rebate Program will provide much-needed relief. It will require drug companies to pay a rebate if they raise certain Part B and Part D drug prices faster than inflation, reining in the industry practice of sky-high annual price adjustments.\textsuperscript{7} This deterrent will strengthen beneficiary and program finances. Drug price increases usually translate into higher out-of-pocket costs, especially for consumers who pay coinsurance, as most Medicare enrollees do. They are also passed along to Medicare and to the taxpayers who help fund the program, and to all beneficiaries in the form of higher deductibles and premiums.\textsuperscript{8} Better controlling the drug prices on which these shifted costs are based will lower spending and improve access to care.

We therefore commend CMS for its attention to prompt implementation of the Rebate Program, including this timely initial guidance. As CMS explains, although full implementation will appropriately span multiple years, the program is expected to have an impact much sooner. For example, while CMS does not plan to invoice drug companies for Part B inflation-based rebates until 2025, the first quarterly period for which drug companies will be required to pay those rebates began January 1. Companies may have already adjusted their pricing behaviors in preparation. Further, beginning April 1, coinsurance for inflation-busting Part B drugs will be based on what Medicare would have paid had the drug’s price growth not outpaced inflation. This inflation-adjusted payment will protect beneficiaries from unnecessary costs and undue stress.

The nonpartisan Congressional Budget Office (CBO) expects these gains to continue. They estimate the Rebate Program will save billions of dollars for beneficiaries, taxpayers, and Medicare in the coming years. Critically, it will do so while bolstering health outcomes and program solvency. CBO notes the IRA’s lower drug costs will increase medication adherence, improving beneficiary health and reducing the need for—and Medicare spending on—more costly care.\textsuperscript{9}

Thank you again for the opportunity to comment. Medicare Rights strongly supports the IRA’s Rebate Program. These long overdue reforms will strengthen Medicare as well as beneficiary health and
